

# The Digital Bunker™

## Business Continuity for **Pandemic** Preparedness

**CDC** and **OSHA** estimate as much as **40 percent of a workforce** could be affected by a pandemic and be absent from work due to illness, having to care for a sick family member, or having to care for children in the event of a school closure.

**TetherView's Digital Bunker™** is the quintessential tool for keeping your business and people safe during a pandemic. As concerns continue to grow around SARS-CoV-2 and COVID-19 (Coronavirus), enabling employees to effectively work from home is a top priority.

TetherView's Standby Virtual Desktops (VDI) enable users to have access to their data from any device or location, without compromising a business' security or compliance standards.

### **Virtual Desktops (VDI).**

At the core of each Digital Bunker is a Virtual Desktop. TetherView has created the first and only "Zero Trust" IT Infrastructure that combines the best of cloud technology while maintaining the security and control of a traditional on-premise environment. **Additionally, our VDI's enable IT teams to leverage access controls (monitoring, file management, etc.) while maintaining business continuity.**

### **Mobile Device Management.**

Pocket Protector™ is considered one of TetherView's crown jewels. Pocket Protector™ helps companies enable an effective BYOD policy that is secure and compliant. Pocket Protector™ helps segment personal data from specifically defined corporate data on any mobile device or laptop.
